Subject: 110 cu. ft. Nitrogen Cylinder Temperature Correlation Chart

To address various Badger regulated model wheeled fire extinguisher inspection, maintenance and service requirements, the following temperature correlation chart is provided.

Because nitrogen cylinder operating pressures change with extreme variations in ambient temperature, the following temperature correlation chart has been developed to assist service personnel in determining the minimum acceptable operating pressure necessary to ensure optimum extinguisher performance.

Should you have any questions, refer to the service manual P/N 21005976 or contact Badger at (434) 964-3200.
